

Computer Networks: How to Run Final Project

Dr. Flavio Esposito .

Rahul K Chauhan

Part 1

How to Run DecoyRKC - the final project.

Explanation

This repository contains code corresponding to DecoyRKC, which, consists of these major components:

- Client, who wishes to use Decoy Routing and reach a censored website.
- Overt-destination, a website, which censor thinks client wants to visit.
- Covert-destination, a website, which client really wants to visit.
- Proxy, a machine, who proxies client's traffic and fetches covert-destination for it.
- SDN Controller, which installs relevant redirection rules on SDN switches.

Clone a fresh copy of code. Install Dependencies and Build Code.

<https://github.com/rkc007/DecoyRKC>

Install all the requirements by reading Readme in the GitHub Repository. Each and every detail regarding running the project is uploaded to GitHub repository.
